

Fundamentals of Web Design

CHAPTER 4 – Creating a Simple Page

EXERCISE 4-2. Adding minimal structure

NOTE: You will only add the code in **blue font color** to the existing text. Text in **black** is the existing text.

1. Using your text editor, open the new *index.html* document if it isn't open already and add the HTML tags where required (text in blue):
(Make sure you open and close the tags properly)

```
<!DOCTYPE html>
<html>
<head>
<meta charset="utf-8">
<title>Black Goose Bistro</title>
</head>
<body>
Black Goose Bistro
The Restaurant
The Black Goose Bistro offers casual lunch and
dinner fare in a relaxed atmosphere. The menu
changes regularly to highlight the freshest local
ingredients.
Catering
You have fun. We'll handle the cooking. Black Goose
Catering can handle events from snacks for a meetup
to elegant corporate fundraisers.
Location and Hours
Seekonk, Massachusetts;
Monday through Thursday 11am to 9pm; Friday and
Saturday, 11am to midnight
</body>
</html>
```

2. You added a declaration, the HTML root element, the document head, the character encoding information, the title of the web page and finally, you defined the body of the document by wrapping the text content in <body> and </body> tags. The document is complete for now.
3. Save the document in the bistro folder, so that it overwrites the old version. Open the file in the browser or hit Refresh to see changes.

4. **This is how it should look like:** →

5. We will talk about the results in the video.
Keep the file open if you plan to complete the next exercise from chapter 4.
